

MAY NEWS UPDATE

Hi Folks, been another top month here for Catch Carp Spain in Extremadura. Although we only managed a couple of short sessions this month on Orellana, we still managed to put some cracking monster carp on the bank. The fish were still sporadically spawning down on Orellana and also we were having to contend with some pretty heavy weed still in the lake. Having said this, over the two sessions we still managed to get into double figures for the amount of fish caught with most of these fish being in the 30lb plus bracket, and the best being another 45lb monster common. The reason we at Catch Carp Spain haven't been fishing so much over the last month is that we've been putting together some cracking new products for our clients. These should be available for our clients to view on the website in the coming weeks and should make things a lot easier for our clients when deciding how they would like to spend their fishing holiday with us. We've also been doing some work with Mainline Baits here in Spain and have a new boilie range coming out from them that we think is going to be perfect for here in Extremadura and at a very affordable price. Will be testing these new boilies for the first time in June, so will keep you updated on how they perform. So please keep your eye on the website for the new products which will be with you as soon as possible.
